

MiniTec launch new telescopic-guide height adjustment system for work station range

Basingstoke UK, January 2008: MiniTec have added a new telescopic-guide height adjustment system for its range of workbenches and workstations. Available with a choice of manual height adjustment, hand-cranked hydraulic or electro-hydraulic operation, the range covers basic floor to work table fitting dimensions of 545 mm and 645 mm, each with a vertical stroke of 300 mm.

The new telescopic-guide height adjustment systems meet the increasing demand for workplace comfort and efficiency as well as comply with the latest recommended working practices for manual processing and inspection lines.

MiniTec's workstations are available with a wide range of accessories to provide everything from simple benches, tables and desks to complete functionally designed production cells with tool holders, component storage, lighting systems and all components necessary for user-friendly and highly efficient process lines.

To minimise workstation design time, MiniTec's CAD-Menu software uses AutoCAD® commands to quickly realise a dimensioned 2D or 3D layout and a full parts list. The free software is available from MiniTec UK Limited and may also be used for the design of its machine framing, linear positioning, safety and conveying products.

MiniTec's workstation range is part of the comprehensive Profile System – the leading machine building system that includes a wide selection of modular aluminium and stainless steel profiles using the unique time-saving Powerlock® fastener that requires no special tools or machining, other than cutting the profile to the required length.

Profile System includes a wide selection of supporting components for cost effective design and fabrication of machine frames for parts and materials handling, work stations, guards, conveyors and completely automated manufacturing systems.
