MINITEC WALDMOHR: TURNING AND MILLING IN PERFECTION

Precision, speed, flexibility: For over 30 years these have been the mantra of MiniTec for the machining of shafts and machine components at the Waldmohr plant. Whether steel, in all variants, aluminium or plastic (POM, PE, PA, ...) - what matters are the requirements of the customer.

We specialise in the machining of surface-hardened precision steel shafts, such as those used within linear technology. The range of services here extends from simple cutting to the complete manufactured drive axis, including all turning, drilling and milling work. Other typical products are shaft blocks, linear bearings, housing units, linear slides, cross beams and shaft supports.

Today, many customers rely on the competence and quality at Waldmohr, and that number is constantly increasing. Orders range from single parts to small runs and batch sizes of several thousand pieces.

MiniTec also uses the in-house machining department and has numerous components for the profile sector and the manufacture of special purpose machines at the facility.

More than 25 qualified specialists are committed to quality manufacturing every day in our extensive machine shop that is equipped with a state-of-the-art CNC machine park with a total of 11 multi-axis units – Our standard 5-axis systems are supplemented by fully automatic 7- and 9-axis machining centres.

The continual training of our employees and the comprehensive quality management are additional guarantees for efficiency, economy and reliable adherence to deadlines. The plant has 4 halls with a total floor space of 3000 sqm.

Stefan Geyer, manager of the plant Waldmohr: „We consistently implement our motto „The Art of Simplicity“ here as well. We work to the supplied, detailed drawings - as soon as they arrive, we take care of the rest. This starts with the technical inspection and continues until the completion and on-time delivery of the desired end product. It couldn't be more simple – which is why our customers benefit every day“.

Stefan Geyer, Manager Waldmohr

We look forward to your enquiries!
